

Wireless Services Brochure

Edition 2009/2010

SilverNet Ltd

Site Surveys

Why do a Site Survey?

Part of proving a network design requires the validation of wireless links to ensure that reliable connections can be established.

Undertaking on site mock-up testing of radio links is the best way of ensuring that the fully installed wireless equipment will operate reliably.

Any outstanding risks and uncertainty associated with proposed links can be eliminated with onsite validation.

Surveying can provide confidence in the network design and avoid the costs of relocating links if they fail to provide the reliability or data throughput required.

With many years experience in wireless site surveys, our engineers can advise you of the best way to proceed with your wireless system.

What does the survey include?

- An on site visit by SilverNet staff
- Set-up & validation of your wireless link
- Data throughput measurement
- Assessment of environmental factors
- Inspection of proposed mounting points and cable routes
- A full report recommending any changes that should be made and outlining any potential issues which need to be addressed

Professional Installations

Why choose SilverNet to install your system?

At SilverNet we understand that wireless can be a confusing technology if you are used to cable lines. This is why we offer a comprehensive installation service to assist our resellers, distributors and end users. By doing this you can be sure a working system will be installed quickly .

Once you have planned, designed and procured the necessary elements of your network, SilverNet can undertake the installation and commissioning to ensure that the network is configured and operating effectively.

This critical phase of deploying your wireless infrastructure can have a major impact on the performance of the system and should be optimised to provide the best possible coverage and connection speeds.

What will the installation include?

- Identification, negotiation and acquisition of installation sites
- Arrangement of installation platform hire
- On site physical installation of equipment
- System testing and optimisation
- Network maintenance & support

Our professional engineers have installed hundreds of radio links and can optimise any link to ensure you get the most from your wireless system.

Wireless Training

Why do Training?

Having the knowledge to fully understand the technology employed in your business can enable you to appreciate the benefits and limitations of equipment currently available, as well as new technology coming on to the market.

Having an understanding of both the theoretical as well as the practical issues involved with wireless technology can play a key role in a company's ability to understand the requirements and limitations of their wireless networks.

SilverNet offers both standard and bespoke training courses for its clients. Whether you want a special course held at your local premises to meet your specific requirements or you simply want to send a group of your personnel on our one day training course, SilverNet can help.

What will be covered?

- Radio basic theory
- Wireless industry and regulatory standards
- Networking basics
- Wireless Applications
- Installation procedures and practical tips

Call us today to speak to a member of staff about training options to suit you.
