

Customer Overview

THE ADDRESS

Gibraltar

THE REQUIREMENTS

An outdoor wireless link to replace leased lines and existing failing wireless link

THE TECHNOLOGY

- STREAM Range

THE BENEFITS

- All weather wireless network
- Simple installation
- Central Management
- Rugged design
- 5Ghz frequency band

Gibraltar Health Authority is a department of the Government of Gibraltar and its purpose is to provide health care to the residents of Gibraltar, an overseas territory of the United Kingdom and home to over 27,000 residents.

Gibraltar enjoys similar health, and standards of health care provision, to most Western European countries..

The Challenge

To replace the expensive leased line connections and a failing wireless link from the Hospital to 2 remote sites with a working wireless link.

The Solution

Gibraltar Health Authority required two secure connections to expand their current network and discontinue using unstable, expensive leased lines.

The hospital was running network traffic to 2 remote sites over expensive leased lines and an existing failing wireless link.

The installation was very quick and simple, the high bandwidth available to the customer has enabled them to have free calls across the whole system as well as a private intranet and a HOSPINET system.

The Technical Bit

The High bandwidth STREAM range was used for the backhaul links to the two remote locations.
